SUMMARY

TypeScript-first senior full-stack engineer with 8+ years shipping production SaaS, APIs and React Native apps on Next.js, Node.js, NestJS and PostgreSQL. Currently leading frontend architecture on Auspira, a contract-management platform for a UK client, and building Grid, an open-source workspace where people and AI coding agents work on the same project. Previously led the frontend rebuild of BullseyeEngagement, a US HR platform used by PepsiCo, Intel and Emory University, cutting page loads by 35%. I own work end to end, from component systems to CI quality gates and releases.

EXPERIENCE

Senior Frontend Lead Engineer (Contract) | Nexora AI Ltd

Aug 2026 – Present

Auspira: NEC contract-management SaaS for a UK client • Remote

- Lead the frontend architecture of Auspira (early warnings, compensation events, PM instructions, defect notices and programme tracking) on Next.js 15 App Router, React 19, TanStack Query 5, Zustand, Ant Design 6 and Tailwind CSS v4.
- Rebuilt the early-warning, compensation-event and programme modules on shared page headers, detail lists and communication components, replacing one-off screens with one reusable component layer.
- Replaced ESLint and Prettier with Biome, moved git hooks to Lefthook, and added a type-check and unit-test gate to the Azure Pipelines build; unified Ant Design theme tokens with Tailwind across screens.

Founder & Lead Engineer | Rabtx • rabtx.dev

Jul 2025 – Present

Independent product studio building developer tools • Remote

- Grid** (github.com/shabirkhan-dev/grid, public beta v0.1.0, MIT / Apache-2.0): a self-hosted workspace where people and AI coding agents (Claude Code, Codex, opencode, any ACP agent) share one project board, live agent threads, file editor, terminals and PR checks, from desktop or phone.
- Architected Grid as a Bun monorepo: a SolidJS PWA console, a Hono + Drizzle + PostgreSQL API, and a Bun WebSocket runner that streams agent events and stores session logs in SQLite, all behind a single port.

Frontend Engineer, Web & Mobile (Part-time Contract) | Kansai Group

May 2024 – Jun 2026

Osaka-based used-car exporter and auction specialist • Remote

- Built the React Native (Expo) mobile app, the Next.js vehicle listing site and the admin panel, with real-time inventory updates.
- Improved page loads by 35% and cut API payloads by 50% by working with the backend on lean per-screen responses; kept live inventory correct after dropped connections.

Lead Frontend Engineer | Excelorithm LLC, Rawalpindi

May 2023 – Jul 2025

- Led the frontend rebuild of BullseyeEngagement, a US HR platform (customers include PepsiCo, Intel, Emory University), from legacy code to Next.js, React Query and Tailwind.
- Set the frontend architecture as a modular monolith with clear feature boundaries, a shared component library and code-review standards.
- Improved key page loads by 35% (SSR/SSG, bundle tuning, caching) and reduced server load by 20% by redesigning client data access.

Senior Full-Stack Developer | Revoxai • Remote

Mar 2021 – May 2023

- Built an AI-powered e-learning platform at an AI startup: Next.js and TypeScript frontend, Node.js/Express APIs, and Python services for the AI features.
- Shipped features across frontend, APIs and deployment; handled security fixes in web and mobile apps.

Freelance Software Developer | Fiverr & direct clients • Remote

Feb 2018 – Jan 2021

- Built web and mobile applications for clients with Node.js, Express, PostgreSQL and React; hardened endpoints with input validation and OWASP practices.

OPEN-SOURCE & PROJECTS

- Starter** (github.com/shabirkhan-dev/starter, MIT / Apache-2.0): production-ready SaaS monorepo (Bun + Turborepo): Next.js, Expo, NestJS, Fumadocs and FastAPI apps sharing one UI layer, TypeScript config and CI pipeline.
- School OS**: multi-tenant school SaaS (Next.js, Expo, NestJS, PostgreSQL) with QR attendance and WhatsApp alerts to parents.

SKILLS

Frontend: React 19, Next.js (App Router), SolidJS, React Native / Expo, TanStack Query, Zustand, Tailwind CSS v4, Ant Design, shadcn/ui, design systems, web performance

Backend & Data: Node.js, NestJS, Express, Hono, Bun, REST APIs, WebSockets, PostgreSQL, MongoDB, Redis, SQLite, Drizzle, Prisma
Delivery & Quality: Docker, GitHub Actions, Azure Pipelines, Azure Container Apps, AWS (EC2, Lambda, SES), Vitest, Biome, Lefthook, CodeQL, Dependabot, OWASP, Linux

AI: LLM API integration, AI coding-agent integration (ACP, Claude Code, Codex), RAG, embeddings and vector search, Ollama / local models • **Also:** Python, Rust, Bash

EDUCATION & LANGUAGES

ICS — Intermediate in Computer Science | GCCE Gilgit | 2021 • English (professional), Urdu (native)
